

Apex Systems | Response to City Services Digital Procurement Platform

Executive Summary

Apex proposes a secure, scalable API-first procurement platform with an integration layer for ERP and identity systems.

Proposed Solution and Implementation Approach

Microservice architecture, audited APIs, encrypted data stores, and scalable event processing. The integration plan includes ERP, SSO, and supplier-portal interfaces.

Timeline, Team Structure, and Milestones

Twenty-four-week implementation with discovery, integration build, security validation, user acceptance testing, and launch. A dedicated solution architect, delivery manager, and security engineer are assigned.

Commercial Proposal

Total price: \$480,000. Assumptions: customer provides ERP sandbox access and identity-provider configuration.

Item	Amount
Implementation and launch	\$480,000
Support	See assumptions above

Security, Compliance, and Risk Controls

ISO 27001-aligned controls, role-based access, encryption in transit and at rest, audit logs, quarterly vulnerability reviews, and privacy impact assessment.

Support, Relevant Experience, and References

Business-hours support with 4-hour critical response. Three comparable public-sector references are available.

Key Assumptions and Risks

The customer will provide timely decisions, access to required systems, and nominated business representatives. Risks will be reviewed in weekly governance meetings.
